

Word Guessing Game

In the Word guessing game, the user has to guess all the letters of a word generated on a random basis. The word must be guessed within a specific number of tries.

Specification:

Build a game of Guess word using Javascript

There is a collection of words and the user has to guess the correct letter in a given word by the hint displayed on the screen.

A game round would look like this:

- Page displayed with a hint of a random word with a maximum chances of 10
- User will guess a letter with the hint given - if it's a correct guess, the letter will be displayed in the box.
- If the guessed letter in the random word displayed, then the letter would appear in the word.
- If the guessed letter doesn't consist of the random word, then your chances of guesses would reduce.
- When tries are over you lose, if the guess is correct you win.
- Game will be reset for the next new word.

Word Properties

- Word must contain letters A-Z only
- Guess chances must be limited to the length of Random Word
- No. of tries to guess the word.
